ELLY DICKENS OYIM

Nairobi, Kenya | +254 712310468 | dickenselly640@gmail.com | LinkedIn | GitHub

Summary

Software Engineer and Full-Stack Developer who builds secure, role-based web platforms for education, agriculture, property management, and healthcare, including an AI-assisted academic assessment system with multi-tenant architecture. Skilled in React, Vite, FastAPI, Node.js, and relational databases including PostgreSQL and MySQL, with experience in authentication, access control, and cloud services such as Supabase and Firebase. Combines software development with CCNA-level networking knowledge and Python automation, giving a well-rounded view of how applications run and communicate. Focused on usability, security, and maintainable code, and committed to continuous learning.

Project Experience

Sep 2025 – Present | Front-End Developer - FarmSphere **Nairobi, Kenya**

- Developed a responsive React marketplace that connects farmers and buyers, with farmer directories, product search, and shopping-cart functionality.
- Designed dedicated dashboards for buyers,sellers, farmers, and administrators,with each interface built around the needs of that role.
- Built user profile pages and role-specific navigation, so each type of user reaches the tools they need quickly.
- Integrated Firebase to support authentication and scalable data handling for a growing digital agriculture platform.
- Created reusable interface components that keep the application consistent and easier to extend.
- Managed source code with Git and GitHub, keeping development organised across features.

Sep 2025 – Present | Full-Stack Developer -LifeLink (Blood Donation Finder) **Nairobi,Kenya**

- Developed a responsive React application that connects blood donors with people who urgently need donations.
- Implemented donor search and filtering by location and blood group, helping requesters find suitable donors faster.
- Built donation-request workflows with urgency selection so that critical cases are clearly identified.
- Created sign-in and registration screens, donor profiles, and a donor-response dashboard for tracking replies to requests.
- Applied API integration, database design, and version control throughout development.

March 2026 | Full-Stack Developer - Scriptora (AI-Powered Academic Platform) Nairobi, Kenya

- Developed a full-stack platform for institutions to create examinations, upload scanned scripts, and use AI-assisted marking.
- Built the frontend with React and Vite and the backend with FastAPI and PostgreSQL/Supabase.
- Implemented secure authentication and role-based access control for different types of users.
- Designed a multi-tenant architecture so multiple institutions can use one platform with separate data.
- Added media storage for scanned scripts, plus student record and results management.
- Built academic performance analysis and result notifications to support timely, informed decisions.

May 2026 | Front-End Developer - ViableVore (Movie Discovery) Nairobi, Kenya

- Built a React and Vite movie-discovery platform that integrates The Movie Database (TMDB) API for browsing and search.
- Displayed detailed movie information, trailers, and related titles to help users discover what to watch.
- Implemented Firebase authentication and protected dashboard routes for signed-in users.
- Added browser-persisted favourites and reviews, and responsive client-side navigation across devices.

June 2026 | Front-End Developer - Rent Flow (Rental Management System) Nairobi, Kenya

- Built a React rental-management interface for landlords, property managers, and tenants.
- Implemented role-specific dashboards for property and tenant management.
- Developed rent and payment tracking, with tenant ledger views that give a clear payment history.
- Added maintenance requests, announcements, reports, and messaging to support day-to-day property operations.

July 2026 | Python Developer - Ping & Latency Monitor CLI (Network Monitor) Nairobi, Kenya

- Built a cross-platform Python command-line application for monitoring host availability, average latency, and packet loss.
- Added host management so users can track multiple hosts, plus geolocation lookup for monitored hosts.
- Implemented JSON-based local data storage and automated reporting.
- Presented results in terminal-friendly tables to support practical network diagnostics.

Sep 2025 | Enterprise 3 - Tier Network Design (Simulation). **Nairobi, Kenya**

- Built an enterprise three-tier network simulation in Cisco Packet Tracer, with access, distribution, and core layers connecting the HR, Finance, and IT departments.
- Connected department PCs and servers through access and distribution switches, building a topology that reflects how a real organisation separates its departments.
- Created VLANs for each department and used show Vlan brief to verify that every port was assigned to the correct VLAN.
- Configured access ports (switchport access) for end devices, so each device joined its own department's VLAN.
- Configured trunk ports on switch uplinks to carry VLAN traffic between the access and distribution layers.
- Configured OSPF for dynamic routing between the distribution routers, so routes are learned automatically instead of entered by hand.
- Tested end-to-end connectivity and troubleshot configuration issues until all departments could communicate as intended.
- Explored network automation concepts, including how to reduce repetitive configuration work

Education

Feb 2026 – Aug 2026 **Moringa School, Nairobi**
Software Engineering

Feb 2021 – Nov 2024 **Nyang'oma Boys High School,Siaya**

Kenya Certificate of Secondary Education

Certifications

January 2026	CCNA 1: Introduction to Networks
March 2026	CCNA 2: Switching, Routing, and Wireless Essentials
June 2026	CCNA 3: Enterprise Networking, Security, and Automation

Skills

Programming & Frameworks: JavaScript, Python,SQL,React,Vite,HTML5, CSS3, Tailwind CSS
Backend & APIs: Node.js, Express.js, FastAPI,REST APIs,Third-Party API Integration
Databases & Cloud: PostgreSQL, MySQL, Supabase, Firebase, Render
Networking: TCP/IP, Switching, Routing, Network Monitoring
Tools & DevOps: Git, GitHub, GitHub Actions, Linux CLI
Application Design: Role-Based Access Control,Authentication, Responsive Design
Professional Strengths: Problem Solving,Agile Development,Functional Collaboration,Documentation
